

Phase 2 / 02.12.2022: Experimentation of intelligent systems for monitoring the phytosanitary status of three vine ecosystems

A.2.1: Continuation of the application of the agronomic protocol

A.2.2: Continuation of monitoring the phytosanitary status of the plants in the three experimental lots by classical and modern means

A.2.3: Continuation of the differentiated application of the treatments applied according to the classical and the modern warning method.

A.2.4: Monitoring the microflora from the three experimental groups following the differentiated application of phytosanitary treatments

A.2.5: Evaluation of the efficiency of the use of intelligent systems / classical methods by analyzing the production of obtained grapes

A.2.6: Collection and processing of experimental data. Comparison of data between partners

A.2.7: Evaluation and exploitation of results

A.2.8: Dissemination of results through work visits, work-shop, communications
