

Phase 3/02.12.2023: Demonstration of the efficient use of intelligent systems in maintaining the phytosanitary status of vineyards

A.3.1: Continuation of the application of the agronomic protocol

A.3.2: Continuation of monitoring the phytosanitary status of plants in the three experimental lots by classical and modern means

A.3.3: Continuation of the differentiated application of the treatments applied according to the classical and the modern warning method.

A.3.4: Monitoring the microflora from the three experimental groups following the differentiated application of phytosanitary treatments

A.3.5: Evaluation of the efficiency of the use of intelligent systems / classical methods by analyzing the production of obtained grapes

A.3.6: Collection and processing of experimental data. Comparison of data between partners

A.3.7: Evaluation and exploitation of results

A.3.8: Wide dissemination of project results through workshop, scientific communications, published articles
